Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with rabbit IgA. Standards or samples are then added to the appropriate microtiter plate wells with Horseradish Peroxidase (HRP) -conjugated antibody preparation specific for rabbit IgA, mix well and incubated. The more the amount of rabbit IgA in samples, the less HRP-antibody bound by pre-coated rabbit IgA. Then a TMB (3,3',5,5' tetramethyl-benzidine) substrate solution is added to each well. And the color develops in opposite to the amount of rabbit IgA in the sample. The color development is stopped and the intensity of the color is measured.
