

Rabbit Testosterone, T ELISA Kit | T elisa kit

pabbit Testosterone, T ELISA Kit

CATALOG #
AAA80694

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Testosterone; T; rabbit Testosterone; T ELISA Kit; T elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of rabbit testosterone. No significant cross-reactivity or interference between rabbit testosterone and analogues was observed.
Assay Type	Competitive
Samples	Serum, plasma, tissue homogenates
Detection Range	0.625 ng/ml-10 ng/ml
Sensitivity	< 0.625 ng/ml
Intra-assay Precision	Intra-assay Precision (Precision within an assay): CV%<15%. Three samples of known concentration were tested twenty times on one plate to assess.
Inter-assay Precision	Inter-assay Precision (Precision between assays): CV%<15%. Three samples of known concentration were tested in twenty assays to assess.
Preparation and Storage	Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions.

ADDITIONAL INFORMATION

Related Product Information for T elisa kit

Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with an antibody specific to testosterone. Standards or samples are added to the appropriate microtiter plate wells with Biotin-conjugated testosterone. A competitive inhibition reaction is launched between testosterone (Standards or samples) and Biotin-conjugated testosterone with the pre-coated antibody specific for testosterone. The more amount of testosterone in samples, the less antibody bound by Biotin-conjugated testosterone. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Substrate solution is added to the wells and the color develops in opposite to the amount of testosterone in the sample. The color development is stopped and the intensity of the color is measured.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
