ADDITIONAL INFORMATION

Related Product Information for RA elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with Ractopamine (RA) antigen. Standards or samples are added to the appropriate microtiter plate wells with Ractopamine (RA) specific antibody. The competitive inhibition reaction is launched between pre-coated Ractopamine (RA) and Ractopamine (RA) in standards or samples with the Ractopamine (RA) special antibody. A substrate solution is added to the wells and the color develops in opposite to the amount of Ractopamine (RA) in the standards or samples. The color development is stopped and the intensity of the color is measured.
