

## Guinea Pig Occludin ELISA Kit | OCLN elisa kit

Guinea pig Occludin ELISA Kit

CATALOG #  
**AAA84091**

REACTIVITY  
**Guinea Pig**

### PRODUCT SYNONYMS

Occludin; Guinea pig Occludin ELISA Kit; OCLN elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| Reactivity              | Guinea Pig                                                                 |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate |
| Assay Type              | Competitive                                                                |
| Detection Range         | 0.5-10ng/mL                                                                |
| Sensitivity             | 0.1ng/mL                                                                   |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                        |

| Related Product Information for OCLN elisa kit | <p><b>For samples:</b> Serum, plasma, cell culture supernatants, body fluid and tissue homogenate</p> <p><b>INTENDED USE</b> This OCLN ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat OCLN. This ELISA kit for research use only!</p> <p><b>PRINCIPLE OF THE ASSAY</b> OCLN ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-OCLN antibody and an OCLN-HRP conjugate. The assay sample and buffer are incubated together with OCLN-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the OCLN concentration since OCLN from samples and OCLN-HRP conjugate compete for the anti-OCLN antibody binding site. Since the number of sites is limited, as more sites are occupied by OCLN from the sample, fewer sites are left to bind OCLN-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The OCLN concentration in each sample is interpolated from this standard curve.</p> |
