

Guinea Pig Indoxyl Sulfate ELISA Kit | IS elisa kit

Guinea pig Indoxyl Sulfate ELISA Kit

CATALOG #
AAA84244

REACTIVITY
Guinea Pig

PRODUCT SYNONYMS

Indoxyl Sulfate; Guinea pig Indoxyl Sulfate ELISA Kit; IS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Guinea Pig
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	1.0-25mg/mL
Sensitivity	0.1mg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IS elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE: This IS ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig IS. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY: IS ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IS antibody and an IS-HRP conjugate. The assay sample and buffer are incubated together with IS-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IS concentration since IS from samples and IS-HRP conjugate compete for the anti-IS antibody binding site. Since the number of sites is limited, as more sites are occupied by IS from the sample, fewer sites are left to bind IS-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IS concentration in each sample is interpolated from this standard curve.
