

Human soluble E-selectin ELISA Kit | Ses elisa kit

Human soluble E-selectin ELISA Kit

CATALOG #
AAA85116

REACTIVITY
Human

PRODUCT SYNONYMS

soluble E-selectin; Human soluble E-selectin ELISA Kit; Human soluble E-selectin (Ses) ELISA Kit; soluble E-selectin ELISA Kit (Human); Ses elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of SELE. No significant cross-reactivity or interference between SELE and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between SELE and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for Ses elisa kit	Intended Uses: This SELE ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human SELE. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: SELE ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-SELE antibody and an SELE-HRP conjugate. The assay sample and buffer are incubated together with SELE-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SELE concentration since SELE from samples and SELE-HRP conjugate compete for the anti-SELE antibody binding site. Since the number of sites is limited, as more sites are occupied by SELE from the sample, fewer sites are left to bind SELE-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SELE concentration in each sample is interpolated from this standard curve.
Product Categories/Family for Ses elisa kit	Human ELISA Kit

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
