

## Human CD42 ELISA Kit | CD42 elisa kit

Human CD42 ELISA Kit

CATALOG #  
**AAA85977**

REACTIVITY  
**Human**

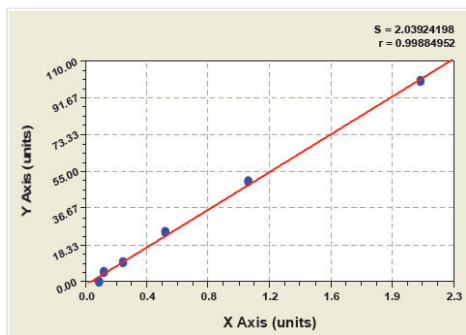

### PRODUCT SYNONYMS

CD42; Human CD42 ELISA Kit; CD42 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                  |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                             |
| Assay Type              | Competitive or Sandwich                                                                                                                                                                |
| Detection Range         | 5.0-100ng/mL                                                                                                                                                                           |
| Sensitivity             | 1.0ng/mL                                                                                                                                                                               |
| Intended Uses           | This CD42 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human CD42. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                    |

### ADDITIONAL INFORMATION

#### Related Product Information for CD42 elisa kit

**Principle of the Assay:** CD42 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CD42. Standards or samples are then added to the microtiter plate wells and CD42 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CD42 present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for CD42 are added to each well to "sandwich" the CD42 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CD42 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CD42 concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
