

Human Secretory Immunoglobulin A ELISA Kit | SIgA elisa kit

Human Secretory Immunoglobulin A ELISA Kit

CATALOG #
AAA86413

REACTIVITY
Human

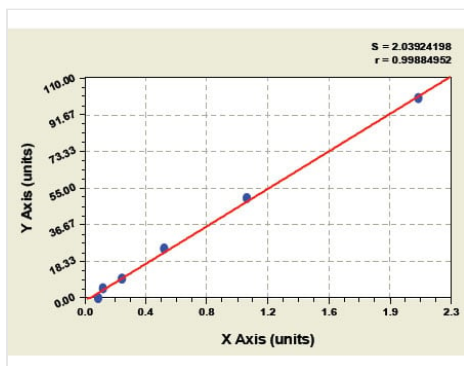

PRODUCT SYNONYMS

Secretory Immunoglobulin A; Human Secretory Immunoglobulin A ELISA Kit; SIgA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive or Sandwich
Detection Range	5.0-100mg/mL
Sensitivity	1.0mg/mL
Highest Standards	100mg/mL
Concentration of Standards	Concentration of Standards
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for SIgA elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This SIGA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human SIGA. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY SIGA ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for SIGA. Standards or samples are then added to the microtiter plate wells and SIGA if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of SIGA present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for SIGA are added to each well to “sandwich” the SIGA immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain SIGA and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SIGA concentration in each sample is interpolated from this standard curve.
Product Categories/Family for SIgA elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
