

## Human Thyroglobulin ELISA Kit | TG elisa kit

Human Thyroglobulin ELISA Kit

CATALOG #  
**AAA87693**

REACTIVITY  
**Human**

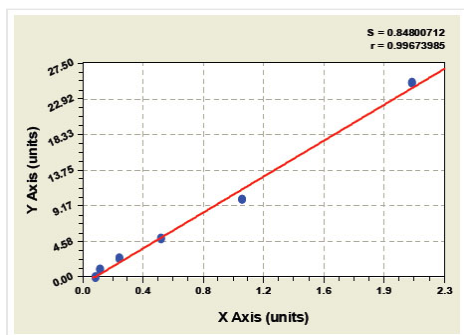

### PRODUCT SYNONYMS

Thyroglobulin; Human Thyroglobulin ELISA Kit; TG elisa kit

### PRODUCT SPECIFICATIONS

|                            |                                                                            |
|----------------------------|----------------------------------------------------------------------------|
| Reactivity                 | Human                                                                      |
| Samples                    | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate |
| Assay Type                 | Competitive or Sandwich                                                    |
| Detection Range            | 50-1000pg/mL                                                               |
| Sensitivity                | 1.0pg/mL                                                                   |
| Highest Standards          | 1000pg/mL                                                                  |
| Concentration of Standards | Concentration of Standards                                                 |
| Preparation and Storage    | Store all reagents at 2-8 degree C.                                        |

| Related Product Information for TG elisa kit | <p><b>For samples:</b> Serum, plasma, cell culture supernatants, body fluid and tissue homogenate</p> <p><b>INTENDED USE</b> This TG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human TG. This ELISA kit for research use only!</p> <p><b>PRINCIPLE OF THE ASSAY</b> TG ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for TG. Standards or samples are then added to the microtiter plate wells and TG if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of TG present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for TG are added to each well to “sandwich” the TG immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain TG and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TG concentration in each sample is interpolated from this standard curve.</p> |
