

## Sheep Elastin ELISA Kit | ELN elisa kit

Sheep Elastin ELISA Kit

CATALOG #  
**AAA88383**

REACTIVITY  
**Sheep**

### PRODUCT SYNONYMS

Elastin; Sheep Elastin ELISA Kit; ELN elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Sheep                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                           |
| Assay Type              | Competitive                                                                                                                                                                          |
| Sensitivity             | 0.1 ng/mL.                                                                                                                                                                           |
| Intended Uses           | This ELN ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep ELN. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                  |

### ADDITIONAL INFORMATION

#### Related Product Information for ELN elisa kit

**Principle of the Assay:** ELN ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-ELN antibody and an ELN-HRP conjugate. The assay sample and buffer are incubated together with ELN-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ELN concentration since ELN from samples and ELN-HRP conjugate compete for the anti-ELN antibody binding site. Since the number of sites is limited, as more sites are occupied by ELN from the sample, fewer sites are left to bind ELN-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ELN concentration in each sample is interpolated from this standard curve.
