

Chicken Podocalyxin ELISA Kit | PCX elisa kit

Chicken Podocalyxin ELISA Kit

CATALOG #
AAA89269

REACTIVITY
Chicken

PRODUCT SYNONYMS

Podocalyxin; Chicken Podocalyxin ELISA Kit; PCX elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

INTENDED USE This PCX ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken PCX. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY PCX ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PCX antibody and an PCX-HRP conjugate. The assay sample and buffer are incubated together with PCX-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PCX concentration since PCX from samples and PCX-HRP conjugate compete for the anti-PCX antibody binding site. Since the number of sites is limited, as more sites are occupied by PCX from the sample, fewer sites are left to bind PCX-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PCX concentration in each sample is interpolated from this standard curve.
