

Goat Immunoglobulin M ELISA Kit | IgM elisa kit

Goat Immunoglobulin M ELISA Kit

CATALOG #
AAA89319

REACTIVITY
Goat

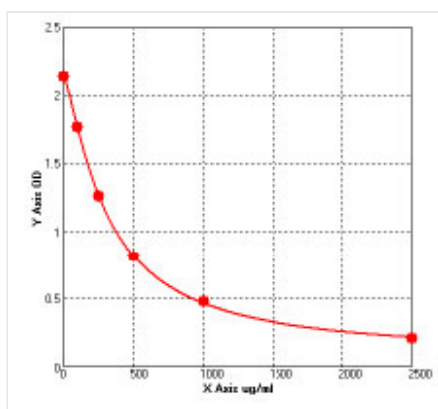

PRODUCT SYNONYMS

Immunoglobulin M; Goat Immunoglobulin M ELISA Kit; IgM elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ug/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This IgM ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat IgM. This ELISA kit for research use only!

Principle of the Assay: IgM ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-IgM antibody and an IgM-HRP conjugate. The assay sample and buffer are incubated together with IgM-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgM concentration since IgM from samples and IgM-HRP conjugate compete for the anti-IgM antibody binding site. Since the number of sites is limited, as more sites are occupied by IgM from the sample, fewer sites are left to bind IgM-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgM concentration in each sample is interpolated from this standard curve.
