

Sheep Alkaline Sphingomyelinase ELISA Kit | alk-Smase elisa kit

Sheep Alkaline Sphingomyelinase ELISA Kit

CATALOG #
AAA90273

REACTIVITY
Sheep

PRODUCT SYNONYMS

Alkaline Sphingomyelinase; Sheep Alkaline Sphingomyelinase ELISA Kit; alk-Smase elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Intended Uses	This Alk-Smase ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep Alk-Smase. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for alk-Smase elisa kit

Principle of the Assay: Alk-Smase ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Alk-Smase antibody and an Alk-Smase-HRP conjugate. The assay sample and buffer are incubated together with Alk-Smase-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of the color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Alk-Smase concentration since Alk-Smase from samples and Alk-Smase-HRP conjugate compete for the anti-Alk-Smase antibody binding site. Since the number of sites is limited, as more sites are occupied by Alk-Smase from the sample, fewer sites are left to bind Alk-Smase-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Alk-Smase concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
