

Goat Tenascin C ELISA Kit | TNC elisa kit

Goat Tenascin C ELISA Kit

CATALOG #
AAA90342

REACTIVITY
Goat

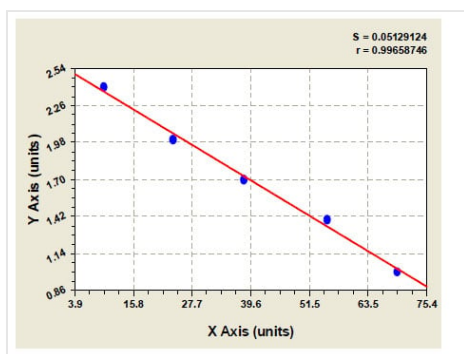

PRODUCT SYNONYMS

Tenascin C; Goat Tenascin C ELISA Kit; TNC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Intended Uses	This TNC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat TNC. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for TNC elisa kit

Principle of the Assay: TNC ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-TNC antibody and an TNC-HRP conjugate. The assay sample and buffer are incubated together with TNC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TNC concentration since TNC from samples and TNC-HRP conjugate compete for the anti-TNC antibody binding site. Since the number of sites is limited, as more sites are occupied by TNC from the sample, fewer sites are left to bind TNC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TNC concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	1842130
NCBI Official Full Name	tenascin-C, partial

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
