

Porcine Apolipoprotein D ELISA Kit | APOD elisa kit

Porcine Apolipoprotein D ELISA Kit

CATALOG #
AAA91191

REACTIVITY
Porcine

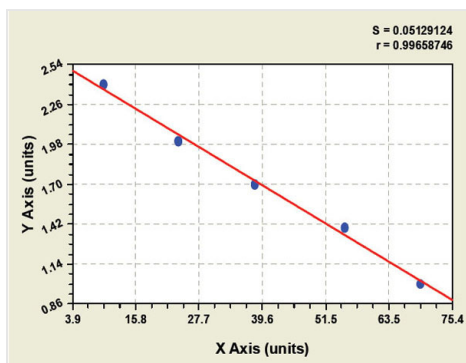

PRODUCT SYNONYMS

Apolipoprotein D; Porcine Apolipoprotein D ELISA Kit; APOD elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This APOD ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine APOD. This ELISA kit for research use only!

Principle of the Assay: APOD ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-APOD antibody and an APOD-HRP conjugate. The assay sample and buffer are incubated together with APOD-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the APOD concentration since APOD from samples and APOD-HRP conjugate compete for the anti-APOD antibody binding site. Since the number of sites is limited, as more sites are occupied by APOD from the sample, fewer sites are left to bind APOD-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The APOD concentration in each sample is interpolated from this standard curve.
