

Chicken Fibrinogen Alpha ELISA Kit | FBGalpha elisa kit

Chicken Fibrinogen Alpha ELISA Kit

CATALOG #
AAA93048

REACTIVITY
Chicken

PRODUCT SYNONYMS

Fibrinogen Alpha; Chicken Fibrinogen Alpha ELISA Kit; FBGalpha elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

INTENDED USE This FG? ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken FG?. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY FG? ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-FG? antibody and an FG?-HRP conjugate. The assay sample and buffer are incubated together with FG?-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the FG? concentration since FG? from samples and FG?-HRP conjugate compete for the anti-FG? antibody binding site. Since the number of sites is limited, as more sites are occupied by FG? from the sample, fewer sites are left to bind FG?-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The FG? concentration in each sample is interpolated from this standard curve.
