

Monkey Exendin 4 ELISA Kit | EXENDIN-4 elisa kit

Monkey Exendin 4 ELISA Kit

CATALOG #
AAA93374

REACTIVITY
Monkey

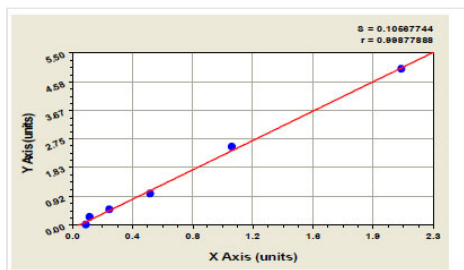

PRODUCT SYNONYMS

Exendin 4; Monkey Exendin 4 ELISA Kit; EXENDIN-4 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	0.5-10ng/mL
Sensitivity	0.1ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This EDN4 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey EDN4. This ELISA kit for research use only!

Principle of the Assay: EDN4 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for EDN4. Standards or samples are then added to the microtiter plate wells and EDN4 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of EDN4 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for EDN4 are added to each well to "sandwich" the EDN4 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain EDN4 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The EDN4 concentration in each sample is interpolated from this standard curve.
