

Sheep Albumin ELISA Kit | ALB elisa kit

Sheep Albumin ELISA Kit

CATALOG #
AAA93580

REACTIVITY
Sheep

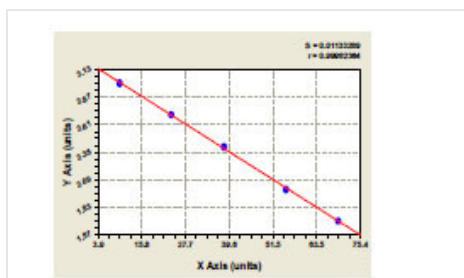

PRODUCT SYNONYMS

Albumin; Sheep Albumin ELISA Kit; ALB elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 mg/L
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This Albumin ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep Albumin. This ELISA kit for research use only!

Principle of the Assay: Albumin ELISA kit applies the competitive enzyme immunoassay technique utilizing a Polyclonal anti-Albumin antibody and an Albumin-HRP conjugate. The assay sample and buffer are incubated together with Albumin-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Albumin concentration since Albumin from samples and Albumin-HRP conjugate compete for the anti-Albumin antibody binding site. Since the number of sites is limited, as more sites are occupied by Albumin from the sample, fewer sites are left to bind Albumin-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Albumin concentration in each sample is interpolated from this standard curve.
