

Monkey Programmed cell death 1 ligand 1 ELISA Kit | PDL1/B7-H1/CD274 elisa kit

Monkey Programmed cell death 1 ligand 1 ELISA Kit

CATALOG #
AAA93966

REACTIVITY
Monkey

PRODUCT SYNONYMS

Programmed cell death 1 ligand 1; Monkey Programmed cell death 1 ligand 1 ELISA Kit; PDL1/B7-H1/CD274 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Specificity	This assay has high sensitivity and excellent specificity for detection of PDL1. No significant cross-reactivity or interference between PDL1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PDL1 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PDL1/B7-H1/CD274 elisa kit	Intended Uses: This PDL1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of MonkeyPDL1. This ELISA kit for research use only! Principle of the Assay: PDL1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PDL1 antibody and an PDL1-HRP conjugate. The assay sample and buffer are incubated together with PDL1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PDL1 concentration since PDL1 from samples and PDL1-HRP conjugate compete for the anti-PDL1 antibody binding site. Since the number of sites is limited, as more sites are occupied by PDL1 from the sample, fewer sites are left to bind PDL1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PDL1 concentration in each sample is interpolated from this standard curve.
