

## Monkey Immunoglobulin G ELISA Kit | IgG elisa kit

Monkey Immunoglobulin G ELISA Kit

CATALOG #  
**AAA96001**

REACTIVITY  
**Monkey**

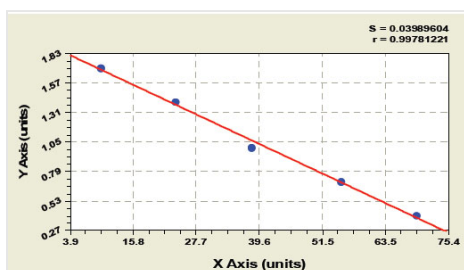

### PRODUCT SYNONYMS

Immunoglobulin G; Monkey Immunoglobulin G ELISA Kit; IgG elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Monkey                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                            |
| Assay Type              | Competitive                                                                                                                                                                           |
| Sensitivity             | 0.1 mg/mL.                                                                                                                                                                            |
| Intended Uses           | This IgG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey IgG. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                   |

### ADDITIONAL INFORMATION

Related Product Information for IgG elisa kit

**Principle of the assay:** IgG ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IgG antibody and an IgG-HRP conjugate. The assay sample and buffer are incubated together with IgG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgG concentration since IgG from samples and IgG-HRP conjugate compete for the anti-IgG antibody binding site. Since the number of sites is limited, as more sites are occupied by IgG from the sample, fewer sites are left to bind IgG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgG concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

|                         |                  |
|-------------------------|------------------|
| NCBI GI #               | 21538829         |
| NCBI Official Full Name | immunoglobulin G |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
