

Sheep Platelet growth factor ELISA Kit | PGF elisa kit

Sheep Platelet growth factor ELISA Kit

CATALOG #
AAA96877

REACTIVITY
Sheep

PRODUCT SYNONYMS

Platelet growth factor; Sheep Platelet growth factor ELISA Kit; PGF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Specificity	This assay has high sensitivity and excellent specificity for detection of PDGF. No significant cross-reactivity or interference between PDGF and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PDGF and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PGF elisa kit	Intended Uses: This PDGF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep PDGF. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: PDGF ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-PDGF antibody and an PDGF-HRP conjugate. The assay sample and buffer are incubated together with PDGF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PDGF concentration since PDGF from samples and PDGF-HRP conjugate compete for the anti-PDGF antibody binding site. Since the number of sites is limited, as more sites are occupied by PDGF from the sample, fewer sites are left to bind PDGF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PDGF concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
